

**Fattore di Cresta del segnale musicale
Andreas Vollenweinder : White Winds
di Mario Bon**

CD di Andreas Vollenweinder : White Winds (CBS) del 1984. Le figure di Lissajous mostrano l'assenza di saturazioni ed il buon livello di modulazione. La distribuzione dell'ampiezza mostra una minima compressione. Il fattore di cresta, a parte un unico 7.36, è sempre superiore a 10 con un massimo a 12.03. Molto Buono.

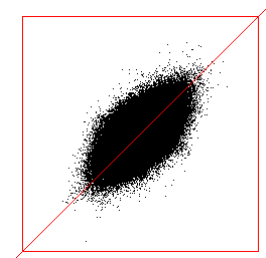

Traccia	Max	CF	Slew rate
